

We offer a complete range of coded and uncoded hollow cathode lamps for AAS devices. The program includes more than 70 single element lamps and more than 100 multielement lamps in standard (37mm) and 50mm diameter.

The lamps have a unique cathode cup system that allows the lamp to reach equilibrium quicker. A special base design ensures a direct connection between cathode pin and wire for maximum reliability. Due to a larger internal gas volume the lamps have an increased lifetime. Every hollow cathode lamp has a guaranteed lifetime of 5000 mA hrs - even for elements like As or Hg.
